Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security Dmitry Korzun, Andrei Gurtov

The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables (DHTs) in the early 2000s. The first proposals, including Chord, Pastry, Tapestry, were gradually improved to cope with scalability, locality and security issues. By utilizing the processing and bandwidth resources of end users, the P2P approach enables high performance of data distribution which is hard to achieve with traditional client-server architectures. The P2P computing community is also being actively utilized for software updates to the Internet, P2PSIP VoIP, video-on-demand, and distributed backups. The recent introduction of the identifier-locator split proposal for future Internet architectures poses another important application for DHTs, namely mapping between host permanent identity and changing IP address. The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests.

Structured Peer-to-Peer Systems covers fundamental issues in organization, optimization, and tradeoffs of present large-scale structured P2P systems, as well as, provides principles, analytical models, and simulation methods applicable in designing future systems. Part I presents the state-of-the-art of structured P2P systems, popular DHT topologies and protocols, and the design challenges for efficient P2P network topology organization, routing, scalability, and security. Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints. Although the strategies are local, their efficiency is due to elements of hierarchical organization, which appear in many DHT designs that traditionally are considered as flat ones. Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge, still partial, about the entire system. These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures, look-ahead routing, and topology-aware ranking. Part IV highlights some known P2P-based experimental systems and commercial applications in the modern Internet. The discussion clarifies the importance of P2P technology for building present and future Internet systems.

From reader reviews:

Lavinia Arthur:

The book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security can give more knowledge and also the precise product information about everything you want. So just why must we leave a very important thing like a book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security? Wide variety you have a different opinion about publication. But one aim this book can give many data for us. It is absolutely appropriate. Right now, try to closer using your book. Knowledge or information that you take for that, you may give for each other; you can share all of these. Book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security has simple shape but you know: it has great and large function for you. You can search the enormous world by open up and read a reserve. So it is very wonderful.

Douglas Quintanar:

Often the book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security will bring that you the new experience of reading any book. The author style to describe the idea is very unique. In case you try to find new book to read, this book very appropriate to you. The book Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security is much recommended to you you just read. You can also get the e-book through the official web site, so you can quickly to read the book.

Cheryl Burnett:

Spent a free time and energy to be fun activity to do! A lot of people spent their leisure time with their family, or their own friends. Usually they accomplishing activity like watching television, planning to beach, or picnic inside the park. They actually doing same task every week. Do you feel it? Do you need to something different to fill your personal free time/ holiday? May be reading a book might be option to fill your free time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to try look for book, may be the e-book untitled Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security can be great book to read. May be it can be best activity to you.

Jeanie Clark:

Beside this particular Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security in your phone, it can give you a way to get nearer to the new knowledge or facts. The information and the knowledge you will got here is fresh in the oven so don't always be worry if you feel like an old people live in narrow town. It is good thing to have Structured Peer-to-Peer Systems: Fundamentals of Hierarchical Organization, Routing, Scaling, and Security because this book offers for your requirements

readable information. Do you oftentimes have book but you seldom get what it's all about. Oh come on, that will not happen if you have this within your hand. The Enjoyable set up here cannot be questionable, including treasuring beautiful island. Techniques you still want to miss the item? Find this book in addition to read it from currently!
