Hyperspectral Remote Sensing (SPIE Press Monograph Vol. PM210) Michael Eismann

Hyperspectral remote sensing is an emerging, multidisciplinary field with diverse applications that builds on the principles of material spectroscopy, radiative transfer, imaging spectrometry, and hyperspectral data processing. While there are many resources that suitably cover these areas individually and focus on specific aspects of the hyperspectral remote sensing field, this book provides a holistic treatment that captures its multidisciplinary nature.

The content is oriented toward the physical principles of hyperspectral remote sensing as opposed to applications of hyperspectral technology. Readers can expect to finish the book armed with the required knowledge to understand the immense literature available in this technology area and apply their knowledge to the understanding of material spectral properties, the design of hyperspectral systems, the analysis of hyperspectral imagery, and the application of the technology to specific problems.

Table of Contents

1. Introduction
2. Optical Radiation and Matter
3. Atomic and Molecular Spectroscopy
4. Spectral Properties of Materials
5. Remotely Sensed Spectral Radiance
6. Imaging System Design and Analysis
7. Dispersive Spectrometer Design and Analysis
8. Fourier Transform Spectrometer Design and Analysis
9. Additional Imaging Spectrometer Designs
10. Imaging Spectrometer Calibration
11. Atmospheric Compensation
12. Spectral Data Models
13. Hyperspectral Image Classification
14. Hyperspectral Target Detection

From reader reviews:

Katrina Varga:

Nowadays reading books are more than want or need but also turn into a life style. This reading practice give you lot of advantages. The huge benefits you got of course the knowledge the actual information inside the book in which improve your knowledge and information. The knowledge you get based on what kind of guide you read, if you want attract knowledge just go with schooling books but if you want truly feel happy read one having theme for entertaining for instance comic or novel. The particular Hyperspectral Remote Sensing (SPIE Press Monograph Vol. PM210) is kind of publication which is giving the reader capricious experience.

Diana Chung:

Reading a reserve can be one of a lot of action that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people enjoyed. First reading a reserve will give you a lot of new information. When you read a book you will get new information because book is one of many ways to share the information as well as their idea. Second, studying a book will make anyone more imaginative. When you reading a book especially fiction book the author will bring that you imagine the story how the personas do it anything. Third, it is possible to share your knowledge to other folks. When you read this Hyperspectral Remote Sensing (SPIE Press Monograph Vol. PM210), you are able to tells your family, friends and soon about yours book. Your knowledge can inspire the mediocre, make them reading a publication.

Jennifer Williams:

People live in this new day of lifestyle always try and and must have the extra time or they will get lot of stress from both lifestyle and work. So , whenever we ask do people have spare time, we will say absolutely yes. People is human not really a robot. Then we inquire again, what kind of activity do you possess when the spare time coming to anyone of course your answer will unlimited right. Then ever try this one, reading textbooks. It can be your alternative in spending your spare time, often the book you have read is Hyperspectral Remote Sensing (SPIE Press Monograph Vol. PM210).

Lauren Veach:

This Hyperspectral Remote Sensing (SPIE Press Monograph Vol. PM210) is fresh way for you who has fascination to look for some information mainly because it relief your hunger of information. Getting deeper you on it getting knowledge more you know or else you who still having tiny amount of digest in reading this Hyperspectral Remote Sensing (SPIE Press Monograph Vol. PM210) can be the light food in your case because the information inside this specific book is easy to get by means of anyone. These books produce itself in the form and that is reachable by anyone, yep I mean in the e-book type. People who think that in publication form make them feel sleepy even dizzy this guide is the answer. So there is absolutely no in

reading a e-book especially this one. You can find what you are looking for. It should be here for you actually. So , don't miss it! Just read this e-book sort for your better life and knowledge.
