Electromagnetic Waves, Materials, and Computation with MATLAB® Dikshitulu K. Kalluri

Readily available commercial software enables engineers and students to perform routine calculations and design without necessarily having a sufficient conceptual understanding of the anticipated solution. The software is so user-friendly that it usually produces a beautiful colored visualization of that solution, often camouflaging the fact that the program is executing the wrong simulation of the physical problem.

Electromagnetic Waves, Materials, and Computation with MATLAB® takes an integrative modern approach to the subject of electromagnetic analysis by supplementing quintessential "old school" information and methods with instruction in the use of newer commercial software such as MATLAB and methods including FDTD. Delving into the electromagnetics of bounded simple media, equations of complex media, and computation, this text includes:

- Appendices that cover a wide range of associated issues and techniques
- A concluding section containing an array of problems, quizzes, and examinations
- A downloadable component for instructors including PowerPoint™ slides, solutions to problems, and more

Striking a balance between theoretical and practical aspects, internationally recognized expert Dikshitulu Kalluri clearly illustrates how intuitive approximate solutions are derived. Providing case studies and practical examples throughout, he examines the role of commercial software in this process, also covering interpretation of findings. Kalluri's extensive experience teaching this subject enables him to streamline and convey material in a way that helps readers master conceptual mathematical aspects. This gives them confidence in their ability to use high-level software to write code, but it also ensures that they will never be solely dependent on such programs.

From reader reviews:

Francisco Gentry:

The book Electromagnetic Waves, Materials, and Computation with MATLAB® will bring someone to the new experience of reading a book. The author style to elucidate the idea is very unique. In the event you try to find new book to read, this book very acceptable to you. The book Electromagnetic Waves, Materials, and Computation with MATLAB® is much recommended to you you just read. You can also get the e-book through the official web site, so you can quicker to read the book.

Jennifer Rogers:

Reading a e-book tends to be new life style in this particular era globalization. With studying you can get a lot of information that will give you benefit in your life. Along with book everyone in this world may share their idea. Books can also inspire a lot of people. Plenty of author can inspire all their reader with their story or maybe their experience. Not only situation that share in the books. But also they write about the information about something that you need instance. How to get the good score toefl, or how to teach children, there are many kinds of book that you can get now. The authors on earth always try to improve their expertise in writing, they also doing some research before they write to the book. One of them is this Electromagnetic Waves, Materials, and Computation with MATLAB®.

Billy Stinson:

Do you one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Try to pick one book that you never know the inside because don't determine book by its deal with may doesn't work the following is difficult job because you are frightened that the inside maybe not since fantastic as in the outside look likes. Maybe you answer may be Electromagnetic Waves, Materials, and Computation with MATLAB® why because the amazing cover that make you consider regarding the content will not disappoint you actually. The inside or content is actually fantastic as the outside or even cover. Your reading sixth sense will directly assist you to pick up this book.

Susan Hare:

Are you kind of occupied person, only have 10 or even 15 minute in your time to upgrading your mind talent or thinking skill perhaps analytical thinking? Then you have problem with the book as compared to can satisfy your limited time to read it because all this time you only find guide that need more time to be examine. Electromagnetic Waves, Materials, and Computation with MATLAB® can be your answer since it can be read by a person who have those short spare time problems.
