Map Projections: Cartographic Information Systems Erik W. Grafarend, Rey-Jer You, Rainer Syffus

In the context of Geographical Information Systems (GIS) the book offers a timely review of Map Projections. The first chapters are of foundational type. We introduce the mapping from a left Riemann manifold to a right one specified as conformal, equiaerial and equidistant, perspective and geodetic. In particular, the mapping from a Riemann manifold to a Euclidean manifold ("plane") and the design of various coordinate systems are reviewed. A speciality is the treatment of surfaces of Gaussian curvature zero. The largest part is devoted to the mapping the sphere and the ellipsoid-of-revolution to tangential plane, cylinder and cone (pseudo-cone) using the polar aspect, transverse as well as oblique aspect. Various Geodetic Mappings as well as the Datum Problem are reviewed. In the first extension we introduce optimal map projections by variational calculus for the sphere, respectively the ellipsoid generating harmonic maps. The second extension reviews alternative maps for structures, namely torus (pneu), hyperboloid (cooling tower), paraboloid (parabolic mirror), onion shape (church tower) as well as clothoid (Hight Speed Railways) used in Project Surveying. Third, we present the Datum Transformation described by the Conformal Group $C_{10}(3)$ in a threedimensional Euclidean space, a ten parameter conformal transformation. It leaves infinitesimal angles and distance ratios equivariant. Numerical examples from classical and new map projections as well as twelve appendices document the Wonderful World of Map Projections.

From reader reviews:

Armando Lemaire:

The knowledge that you get from Map Projections: Cartographic Information Systems will be the more deep you digging the information that hide into the words the more you get interested in reading it. It does not mean that this book is hard to be aware of but Map Projections: Cartographic Information Systems giving you buzz feeling of reading. The author conveys their point in specific way that can be understood simply by anyone who read it because the author of this publication is well-known enough. This kind of book also makes your own personal vocabulary increase well. So it is easy to understand then can go along with you, both in printed or e-book style are available. We highly recommend you for having this kind of Map Projections: Cartographic Information Systems instantly.

Grace Seals:

Reading can called mind hangout, why? Because if you are reading a book specifically book entitled Map Projections: Cartographic Information Systems your thoughts will drift away trough every dimension, wandering in most aspect that maybe unfamiliar for but surely can be your mind friends. Imaging every single word written in a guide then become one form conclusion and explanation this maybe you never get before. The Map Projections: Cartographic Information Systems giving you one more experience more than blown away your head but also giving you useful info for your better life in this particular era. So now let us show you the relaxing pattern this is your body and mind will likely be pleased when you are finished examining it, like winning a sport. Do you want to try this extraordinary wasting spare time activity?

Melvin Hayes:

Do you have something that you want such as book? The e-book lovers usually prefer to pick book like comic, quick story and the biggest you are novel. Now, why not seeking Map Projections: Cartographic Information Systems that give your enjoyment preference will be satisfied by simply reading this book. Reading addiction all over the world can be said as the means for people to know world considerably better then how they react to the world. It can't be explained constantly that reading practice only for the geeky man or woman but for all of you who wants to always be success person. So , for all you who want to start reading through as your good habit, you can pick Map Projections: Cartographic Information Systems become your starter.

Joshua White:

Many people spending their moment by playing outside having friends, fun activity using family or just watching TV the whole day. You can have new activity to invest your whole day by reading a book. Ugh, do you consider reading a book will surely hard because you have to bring the book everywhere? It fine you can have the e-book, bringing everywhere you want in your Cell phone. Like Map Projections: Cartographic Information Systems which is getting the e-book version. So , try out this book? Let's view.
