*Boris Kovalerchuk, Evgenii Vityaev*

## **Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) Boris Kovalerchuk, Evgenii Vityaev**

*Data Mining in Finance* presents a comprehensive overview of major algorithmic approaches to predictive data mining, including statistical, neural networks, ruled-based, decision-tree, and fuzzy-logic methods, and then examines the suitability of these approaches to financial data mining. The book focuses specifically on relational data mining (RDM), which is a learning method able to learn more expressive rules than other symbolic approaches. RDM is thus better suited for financial mining, because it is able to make greater use of underlying domain knowledge. Relational data mining also has a better ability to explain the discovered rules - an ability critical for avoiding spurious patterns which inevitably arise when the number of variables examined is very large. The earlier algorithms for relational data mining, also known as inductive logic programming (ILP), suffer from a relative computational inefficiency and have rather limited tools for processing numerical data.

*Data Mining in Finance* introduces a new approach, combining relational data mining with the analysis of statistical significance of discovered rules. This reduces the search space and speeds up the algorithms. The book also presents interactive and fuzzy-logic tools for 'mining' the knowledge from the experts, further reducing the search space.

*Data Mining in Finance* contains a number of practical examples of forecasting S&P 500, exchange rates, stock directions, and rating stocks for portfolio, allowing interested readers to start building their own models. This book is an excellent reference for researchers and professionals in the fields of artificial intelligence, machine learning, data mining, knowledge discovery, and applied mathematics.

**From reader reviews:**

**Diana Sturgill:**

This Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) are usually reliable for you who want to become a successful person, why. The key reason why of this Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) can be one of many great books you must have will be giving you more than just simple examining food but feed you actually with information that perhaps will shock your prior knowledge. This book is actually handy, you can bring it almost everywhere and whenever your conditions both in e-book and printed types. Beside that this Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) forcing you to have an enormous of experience including rich vocabulary, giving you trial of critical thinking that we realize it useful in your day exercise. So , let's have it and revel in reading.

**Thomas Carlson:**

The particular book Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) has a lot associated with on it. So when you read this book you can get a lot of profit. The book was compiled by the very famous author. The author makes some research previous to write this book. That book very easy to read you will get the point easily after perusing this book.

**Ella Woods:**

Book is one of source of understanding. We can add our knowledge from it. Not only for students and also native or citizen need book to know the change information of year to help year. As we know those textbooks have many advantages. Beside we all add our knowledge, could also bring us to around the world. Through the book Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) we can consider more advantage. Don't you to definitely be creative people? To get creative person must prefer to read a book. Merely choose the best book that suited with your aim. Don't always be doubt to change your life with that book Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science). You can more inviting than now.

**Larhonda Kennedy:**

Reading a book make you to get more knowledge from that. You can take knowledge and information from your book. Book is written or printed or illustrated from each source that will filled update of news. Within this modern era like currently, many ways to get information are available for a person. From media social

including newspaper, magazines, science guide, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Ready to spend your spare time to open your book? Or just in search of the Data Mining in Finance: Advances in Relational and Hybrid Methods (The Springer International Series in Engineering and Computer Science) when you required it?
